Made in America

Imagined, built, and delivered, here in America. The high quality standard of "*Made in America*" products continues with Teem Wholesale Inc.'s Liberty Series. The journey of a Liberty door begins in the Appalachian Mountains, travels through the skilled hands of our custom craftsmen, and ends in the comfort of your home. Our 100,000 square foot facility provides a climate controlled environment to create doors of superior Liberty quality. The personal pride that each door is constructed with is passed on for generations. It's not just a door, it's a way of life.

Solid Wood *inside & out*

The strength of a door can be determined by its core. Each Liberty Door is constructed with the highest quality, laminated stave core construction to ensure maximum strength. The core of a Liberty Door is manufactured by multiple pieces of lumber glued together with solid wood face veneers. The stresses of each piece of lumber within the core work against each other, resulting in a door that does not bow, bend, or twist over time. This small aspect of a Liberty Door's superior construction makes a big difference in the lifetime of the door and the lifetime of your satisfaction.

Key to *our* Quality

Welcome to the Liberty Door Series!

The Liberty Door Series was created for you, the distinguishing customer. Each door in the Liberty Door Series is hand crafted and assembled in our Ohio City, Ohio location using the finest grade of hardwood lumber available. Our craftsman use the latest technology along with time tested construction methods, such as, stave core construction, doweled corners, and hand sanded panels to provide an overall superior quality. These methods start the arduous process of constructing a door that captures the warmth and beauty of solid wood, but also will stand the test of time. Our vast selection of standard door designs, door top options, door panel options and custom capabilities, will allow you to select a door that provides the perfect combination of style and elegance to compliment your homes' décor. The endless options, superior construction and quality, only found in "Made in America" products, are just some of the advantages of the Liberty Door Series. Liberty Doors by Teem Wholesale are the right doors to make your dreams a reality!

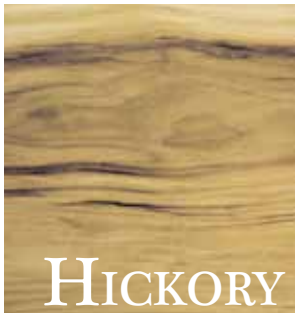
Wood Selection

Oak

The dense, durable wood accompanied by a uniform grain is one of the most common domestic hardwoods available. It's light brown to slightly reddish color is extremely versatile allowing it to compliment any style of home. The medium fine texture is also receptive to a variety of stains and finishes and retains its natural characteristics.

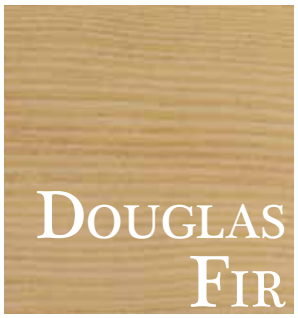


Hickory

Hickory is noted for its hardness, durability, and strength among the hardwoods. With an unpredictable grain that can appear straight or sometimes wavy, hickory can come in a range of colors from blond to deep reddish brown. The dramatic character of the species is increased by random knots and mineral streaks throughout.

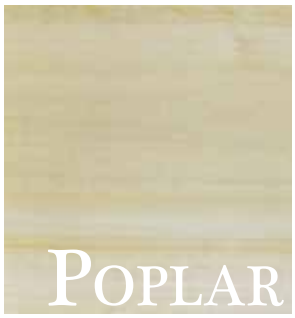
Soft Maple

The growth rings found on soft maple are less distinct and lighter in color. The sapwood is typically grayish white in color with variations of darker reddish brown. With a fine texture and close grain it has an ample surface for staining and finishing. The medium density and strength of the soft maple creates stability and allows for adequate machining.



Douglas Fir

Most renowned for its strength, durability, and ability to withstand the elements. Light tan in color with the heartwood aging into a rich tannish red gives the Douglas Fir a rich color. The close grain and tight knotted wood can also hold various paints and stains. The clean lines and deep color gives the species a lasting appeal for any home.



Poplar

Naturally the species has a light yellow brown color with variations of green tints. Exposure to light tends to darken the green colors to brown. The typically straight and even grain is easily stained or painted due to its smooth surface. Poplar is very resistant to splitting making it simple to machine.

Ash

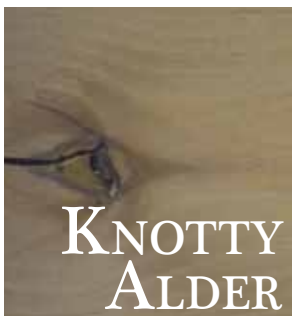
Ash wood typically consists of a very uniform and consistent grain. It is pale white in color, with brownish red strands throughout. When stained the coarse grain is still evident. Ash is extremely dense and durable and withstands the elements well.

Cherry

This impressive hardwood has a rich reddish brown tone that can range from light to dark, and complemented by a straight, fine grain that can contain pith flecks and "beauty marks". After machining, cherry is smooth to touch and can be beautifully finished. Over time the species tends to darken giving off a rich, warm color to add elegance to any room.

African Mahogany

An exotic wood with a light to deep reddish brown color is extremely durable and rot resistant. The grain is typically ribbon like, but may also be straight with an even, medium to coarse texture. This unique wood can also have a shimmering finish.



Knotty Alder

Typically light brown with red and peach color variations; Knotty Alder is most identifiable by the open, solid knots of various size, color, and shape. The distinct characteristics of Knotty Alder can also be enhanced by stain or finish.

Liberty Doors is proud to accommodate a wide variety of wood selections. If the selection of your choice is not listed, please contact your Teem Wholesale representative for more options.

Select species in the Liberty Door Series have an option of rustic grade available. Please see page 20 for a more detailed description.
